Water Commissioners' Report.

When the report of Water Commissioners submitted a year ago was made, the water system had been in operation so short a time that it was then impossible to tell much of its working. The pump had been put in motion on the 16th day of October previous, a trifle less than four months before, and in the few weeks that intervened before winter made an end to the season's ditching not many taps were made in the main, and as the takers only paid from January 1st, but little revenue had then been derived. Only \$215.89 had then been received from service pipe, tapping the main, and water rates combined. With the opening of spring applications came quite frequently and the number of takers constantly increased until the end of the season, when the number was seventy-seven, and the annual income from the water taken \$872.50. This amount will be materially increased during the year to come by an increase in the number of takers, as there are upwards of fifty tenements within reach of the system in which it is not taken. The running expenses for the year as they have been apportioned were \$862.04, which includes no item for use of the factory, which is considered a part of the system. The property is kept insured and in repair, and the expense of both of these items together with the cost of pumping the water is included in the above named amount. There was received from water rates during the same period \$1,097.24 or enough to pay the running expenses and \$235.02 more to apply to the payment of the interest on the bonds. The rates have been paid cheerfully and at the end of the year there was only \$83.50 due for service pipe, tapping the main and water rates all told, remaining unpaid. During the year a new hydrant has been put into the system near the post office for use in case of fire in the compact portion of the village, and the line has been extended 1125 feet into the cemetery for spraying the avenues and lots, 1 and 1-4 inch and 1 inch pipe being used for the purpose. It was intended to have completed this work before Memorial day, but owing to delays it was somewhat later when it was done. The cost for

pipe and fittings was \$70.78, laying the pipe \$67.00, to which should be added about \$12.00 for incidentals, making the whole cost ready for the hose practically \$150.00. A rate of \$1.00 for a single lot and \$1.50 for a double lot has been established. The water was not let into the cemetery till late and the conveniences for using it, being hastily prepared, were not of the best, therefore it was not so well patronized as it promised to be when put in. An improvement will be made this spring which at slight expense will enable a child to easily operate it. This ought to be a good investment but whether it will be or not remains to be seen. A large vacuum pump was obtained and set up in the pumping station during the summer to determine whether or not a larger vacuum pump than the one we had been using could be used to advantage. It was found to assist the large pump materially, and as a result of the experiment a new Knowles vacuum pump was purchased and set up in the station. The price paid was \$225.00. This has added to the efficiency of the pumps, but they do not yet perform the work they were designed for and expected to do. The engineer and the pump builder confidently expected that the large pump, at the pleasure of the engineer, could be run at the rate of one hundred strokes per minute. The well system was planned and the wells made were supposed to be sufficient in number and capacity to furnish all the water the pumps could take running at this rate and much more besides. When the pump was started twenty-five or thirty strokes were all it could make, and a month later thirty-six was all it could make and this rate could be sustained for only a few moments. Since then under favorable circumstances, for a few moments it has run nearly twice as fast, but it can only be relied upon for a maximum speed of sixty strokes per minute. This rate is perhaps sufficient for all our needs except in case of fire, when we ought to be able to run faster. Sixty strokes will supply about three good fire streams, but for our perfect protection in case of accident to the standpipe, we ought to be able to supply double this number. The cause and the remedy has been a subject of constant inquiry ever since the pumps started. The pumps seem to be all right, the water supply was supposed to be ample, and the whole was properly done. There were three wells of less depth than the balance of the system, which were sunk deeper this year and after this was done a course of experiments was made beginning on the 28th day of September and ending on November 23d, during which time there was no time when the whole number of wells were in use, and for a portion of the time only one-half of them were in use. The information contained in

the annexed table was obtained and tabulated for future use. One peculiar feature to be observed from it is that the pump runs as rapidly during the second hour of pumping as the first, which, perhaps, may indicate an ample supply of water at the wells, or, that the supply had not been diminished by the first hour's pumping, and we understand that the speed is usually kept up till the day's pumping is done without difficulty. It is to be observed that as the wells were shut off in October the number of strokes of the pump diminished and increased as they were let on again. The table also shows the number of gallons pumped per hour, the number pumped from each well per hour, and the daily consumption, during this time, wanting a few days in the first of November when no record was made except of the number of wells in use.

A deed of the standpipe lot has not yet been obtained; when it is received there will be something to be paid, but aside from this there are practically no debts owed by the water department, an effort having been made to pay everything as closely as possible during this year. There have been sold about seven tons of 10 inch pipe and special castings, for which the town received \$164.67 net. The service pipe used by the town from the main to the street line has been purchased in large quantities at quite a saving in cost. The insurance people have re-rated the buildings in the village, and have made a reduction of 33 1-3 per cent. on dwellings. The rate upon other buildings and stores has been obviously affected according to location and exposure. There has been no case of typhoid fever or diphtheria among the takers of the water from this system, and all along the line seem to be enjoying the beneficial effects of an abundant supply of pure water. There has been expended this year for permanent additions directly and indirectly \$3,001.58, more than two-thirds of which was constructed the year previous. A fair price for a town to pay for hydrant rental is \$10 each per year. Two or three towns in the county now pay this sum. Our twenty-three hydrants are thus worth \$920.00 this year—add this to the amount received from water rates, \$1,097.24, and we have enjoyed an income of \$2,017.24. Now take from this income the interest on the cost of the system,—\$998.03, and the running expenses, \$862.04, added together (\$1,860.07) and the result is a net profit of \$157.17, or if it is not a profit it would seem that there is a saving to the town of this sum by owning the system.

The outlook is encouraging for a prosperous year, and a material increase in the water receipts is confidently expected. The thanks of the Board are due to Mr. Green, who has charge

of the pumping station, for the interest he takes in the machinery in his care, and for the assistance he has rendered us in the performance of our duties. The pages which follow, show to whom money was paid and how much to each. The total cost to date, and a statement for the fiscal year now ending. All of which is respectfully submitted.

TRUE M. GOULD,

JOHN T. BARTLETT,

Water Commissioners.

There are eighteen pupils who have not been absent nor tardy during the school year, and fifty-four who have not been absent nor tardy during one term. Whole number of different scholars registered in all the schools, 164.

In addition to the tabulated statements already given, we invite attention to the following suggestions :

There has been no school at the Branch during the past year. There were but three pupils to attend, and these were given transportation to school No. 9. This resulted in a saving of one-half the expense of maintaining a separate school. Permission was granted Mr. William Hall to send two children to the Chester ("Borough") school during the fall term.

A beginning has been made toward establishing a school of an intermediate grade, between the primary school and the grammar school.

We consider a school of this grade the proper place to establish habits of industry and discipline, and that a teacher of experience and judgment can, in this grade, do more for the pupil than in any other.

The intermediate grade this year, consisted largely of the "uneasy" element of the primary and grammar schools, which made the teacher's work very hard and discouraging.

One help to the progress of our schools would be less irregularity in attendance. More care on the part of the parents, that the child lose no day, or any part of it even, for some slight gain to the home. It will result in a larger permanent loss.

Parents should interest themselves more in their children's progress in school; visit the schools oftener; get acquainted with the methods of instruction, and so be able to assist their children intelligently during vacations. In this way rapid advancement results. Home influence will show in the school-room, whether for good or evil.

There is a great need of apparatus in all of our school-rooms, especially outline maps and globes.

There should be a larger amount of money raised in this town for our schools. We cannot possibly get over nineteen weeks of schooling from the appropriation given, while some of the adjoining towns, not much larger and some no larger, maintain their schools from twenty-four to thirty-two weeks. We should at least have twenty-four weeks of schooling between April and Christmas, besides the high school.

This number of weeks might be divided into three terms of 8 weeks each, giving a shorter vacation between them.

At the last school meeting an appropriation of \$250.00 was

made to repair the high school room and cover a bill for repairs in Candia. The repairs to the high school room consisted in patching and whitewashing the plastering, extending sheathing around the walls, two feet wide, laying a hard pine floor and oiling it, and painting the wood work above the floor.

Some repairs were made at the grammar school house, and a blackboard made for school No. 9; this took all of the money raised.

We hope every parent in town will consider it a duty to attend the school meeting each year, and give their vote to elect the school officers, and their support towards maintaining the schools a proper length of time.

LEWIS O. POLLARD,
EBEN S. GRIFFIN,
ALBERT H. THOMPSON,

School Board.

Raymond, N. H., February 21, 1895.

The annual school district meeting will be held at the Town House on Tuesday, March 12, at 2 o'clock in the afternoon.

Warrants posted at Town House and Post Office.

		\$39 69

The library contains 183 books ; forty-three were presented by the American Unitarian Association of Boston.

The young people have made good use of the privilege which the library, though small, gives them.

We wish more interest was shown by the citizens of this town in the education of the children. A library of a few well selected books would be gladly welcomed, especially by the young people.

A trifling contribution by the citizens, or parents even, would secure reading matter for all, that would be of lasting benefit.

Mr. David H. Brown of Boston has interested some friends of his in our library, and they have pledged themselves to give \$135.00 for the purchase of books for our library, if we would raise \$75.00 in town for the same purpose.

This amount to go with the annual appropriation of \$25.00, will aggregate \$235.00.

At the present time we have \$40.00 pledged. We want \$35.00 more. We would esteem it a great favor, if all who believe in good books for the young would volunteer a small sum without a visit from the trustees, as their time is largely taken in business.

EBEN S. GRIFFIN,
LEWIS O. POLLARD,
GEORGE B. SAWYER.

Trustees of the Free Public Library.

Town Clerk's Report of Vital Statistics

For the Year 1894.

MARRIAGES.

- Jan. 31. Charles I. Brock and Fannie M. Scribner of Raymond, N. H. By Moses T. Cilley, M. E. Clergyman, Raymond, N. H.
- Aug. 21. Charles M. Downes of Concord, N. H., and Mary F. Scribner of Raymond, N. H. By A. C. Keith, licensed preacher, Cape Elizabeth, Me.
- Aug. 22. Alvah D. Whittier of Raymond, N. H., and Kate Thyng of Raymond, N. H. By J. P. Sheafe, Minister, Dover, N. H.
